1 Introduction

This document describes how to integrate and configure menu entries (a maximum of four) in Mozilla Thunderbird. When a menu entry is executed, a virtual application in Fabasoft Folio is called, and the local location of the selected e-mail is passed to the virtual application as a parameter.

2 Software Requirements

System environment: All information contained in this document implicitly assumes our supported client platforms.

Supported platforms: For detailed information on supported operating systems and software see the software product information on the Fabasoft distribution media.

Descriptions in this document are based on the following software:

- Mozilla Thunderbird 115

3 Prerequisites

On the workstation the Fabasoft Folio Client has to be installed. For detailed information see the “Fabasoft Folio Client” white paper. The Fabasoft Folio Client is based on native messaging technology, so it only works in Mozilla Thunderbird that is not installed via Snap.

4 Configuring Fabasoft Folio

The virtual applications that are assigned to the Mozilla Thunderbird buttons can be configured in the vApp configuration.

1. Open the properties of the desired *Virtual Application Configuration*.
2. On the “Third-Party Applications” tab create a new entry in the *Working With External Contents (Classic)* field.

FSCVAPP@1.1001:DefaultConfig (Virtual Application Configuration): Edit

Working With External Contents (Classic)

<input type="checkbox"/>	Context *	Use Case 1
<input type="checkbox"/>	1 Thunderbird Message ▾	FSCVENV@1.1001:UploadFileFromThunderbirdApp ▾ 🔍 +
Add Entry		

3. In the *Context* field select “Thunderbird Message”.
4. In the *Use Case* fields select the applications that should be executed when clicking the corresponding menu entry.
Note: The menu entry is only displayed, if an application is defined in the corresponding field (menu entry 1 to 4).

Fabasoft Folio offers the following predefined application for the configuration of Mozilla Thunderbird:

<p><i>Capture</i> (FSCVENV@1.1001:UploadFileFromThunderbirdApp) Object address: COO.1.1001.1.88194</p>	<p>This application provides the possibility to import an e-mail into the Fabasoft product environment. The e-mail is stored in the user's personal folder.</p>
--	---

5 Configuring Mozilla Thunderbird

The configuration for Mozilla Thunderbird is synchronized to the appropriate workstation when connecting to a Fabasoft Folio Domain with the Fabasoft Folio Client.

As soon as the configuration is synchronized to the work station, the Fabasoft Integration for Mozilla Thunderbird is available.
